

HydroSlide® Service System

Benefits:

- Lowers maintenance costs
- Improves vault servicing efficiency
- No need for confined space entry
- Custom sizing to fit any treatment vault
- Improves sediment removal during servicing from deep chamber vaults
- Easy servicing facilitated by HydroSlide® quick connector and vacuum truck

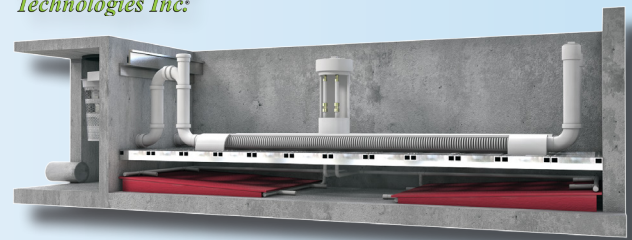

NSBB™ with HydroSlide® (Optional)

NRFS® with HydroSlide® (Optional)

The HydroSlide® service system enables sediment settling chambers to be more efficiently serviced via vacuum truck. This is especially true when the sediment becomes compacted and power washing is necessary to properly vacuum out debris. The HydroSlide® quick connector allows for easy connection with a vacuum truck water supply hose. Once engaged, debris are easily washed toward the vacuum line at the center of the vault and removed. This maximizes service results, reduces overall maintenance efforts and cuts down on reoccurring service costs.

Nutrimax™ with HydroSlide® (Included)
