

# Sungate™ (NSBB™ Option)

Sungate™

## Benefits:

- Isolates vaults for servicing
- Can be deployed or removed under full hydraulic load
- No need for confined space entry
- Great for lake control structures
- Stronger than pipe plugs
- Built Strong: Manufactured from marine grade fiberglass and steel

Service Tools  
& Options

The optional SunGate™ isolates the NSBB™ for servicing at sites where pipes are submerged or where there is a significant base flow. The included tool set makes it easy to deploy and to remove under full hydraulic load without confined space entry. Alternatively, the SunGate™ can be used as a flood control element within lake control structures.

## Maintenance:

- Slide SunGate™ into place at inflow pipe by hand or using included tools
- Twist cam bolts to the right to lock in place and create a water tight seal
- Service NSBB™ vault, basket and sediment chambers via vacuum truck
- Twist cam bolts to the left to release water tight seal. Slide or pull out the SunGate™ with included tool or by hand
