

# Weir Guard™ Overflow Control

Weir Guard™

## Benefits:

- Adaptable filtration for overflow control structures
- Inexpensive, low maintenance option
- Self cleaning design via backflush capability
- Retrofits existing basins
- Effective for wet or dry retention or detention
- Hydrocarbon absorption via optional StormBoom™

## Weir Guard

A screened filter for overflow control structures on wet or dry detention or retention. The Weir Guard is an adaptable, inexpensive, and unobtrusive product with minimal to no maintenance. It can be used to retrofit existing basins and provide a simple mitigation possibility for almost all developers. The unique shape allows for rain to backflush the screens which dramatically reduces the need for maintenance.
